

This technical drawing illustrates a proposed road reconstruction project. The central feature is a plan view of the road alignment, which includes lane markings, curbs, and various engineering details such as manholes, catch basins, and drainage structures. The road is flanked by existing buildings and infrastructure, shown in pink outlines. A legend at the bottom left identifies symbols for different types of utilities and structures. Cross-sections are provided along the length of the road, showing the vertical profile and the placement of the new pavement layers. Key labels include 'SPALNOKA GRANITNI STON' (granite stone paving) and 'OV400, DL. 11,00 m' (manhole cover, diameter 400 mm, length 11.00 m). The drawing also shows the intersection with other roads and the location of existing and proposed sidewalks.
